

EDGE SWEEP ACCESSORY

**ADD TO NEW
OR EXISTING
SWEEPS!**

EDGE

FOR NEW OR EXISTING SWEEPS

The Edge Sweep expands on the already significant added features of a paddle sweep by removing grain from the very edge of the bin and allowing for it to be moved and reclaimed by the paddle sweep. Edge Sweeps can be installed on new or existing DPS G2 and Daay Bin Paddle sweeps.

FEATURES:

- Ability to work around obstructions in the bin up to 12 inches (i.e. internally stiffened bins, doors, ladders).
- Flexible polypropylene bristle head.
- Standard patent pending slip clutch to allow for zero entry operation/automatic startup.
- Designed to be left in bin during burial.
- Moves grain towards the center of the bin to be picked up by the sweep on the second pass.
- Slip Clutch allows for edge sweep to slip until sweep digs itself out of pile.
- Slip Clutch also prevents brush head from snapping if it becomes lodged against something that locks rotation.

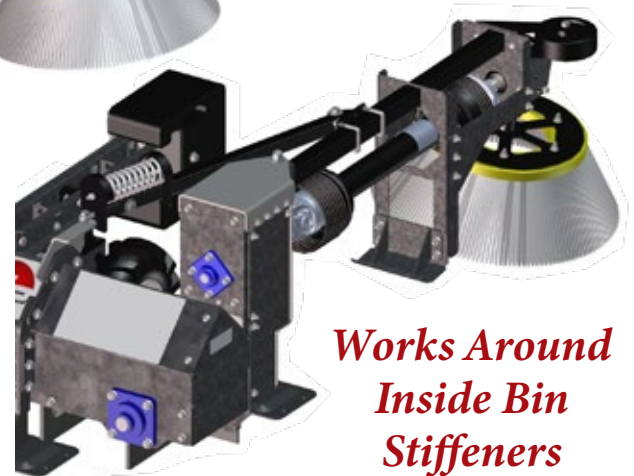

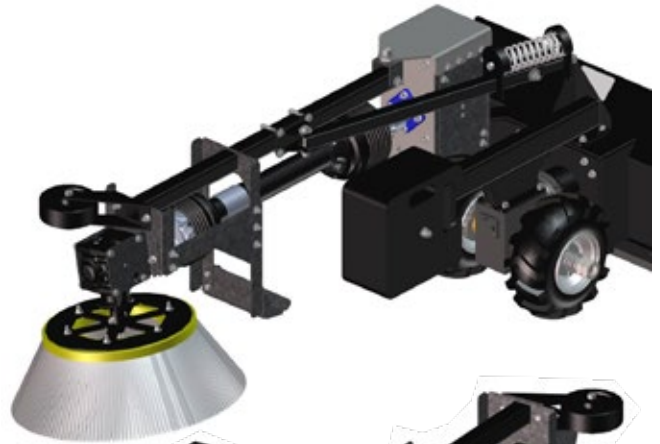

BENEFITS:

- Reduces the labor needed to unload the bin.
- Further reduces need to access the bin.
- Can be retrofitted to existing DPS G2 or Daay Bin Paddle Sweeps.
- Prevent buildup of old grain and debris on the edge of the bin.

DESIGNED EXCLUSIVELY FOR THE:

**DAAY BIN
PADDLE SWEEP**

DPS G2
DAAY BIN PADDLE SWEEP

**Works Around
Inside Bin
Stiffeners**

Note: This is a patent pending design.
